Cracking Adobe Photoshop is a bit more involved, but it can be done. First, you'll need to download a program called a keygen. This is a program that will generate a valid serial number for you, so that you can activate the full version of the software without having to pay for it. After the keygen is downloaded, run it and generate a valid serial number. Then, launch Photoshop and enter the serial number. You should now have a fully functional version of the software. Just remember, cracking software is illegal and punishable by law, so use it at your own risk.

Lightroom 5 is a first-of-its-kind photography app for professional creators. With the ability to organize, create and edit all your photography, the app tackles the heavy lifting for an artist. In addition, it also learns from your work and adjusts your workflow in the most efficient way. As a result, users can not only enjoy the finer details of photography, but even put together an award-winning portfolio, creating a distinctive body of work. Updates are seriously eroding the best feature of Lightroom – the ability to quickly access one's last 50 images. Whether you want to find your last 50 images from the last week, month or two might not matter that much to many. However, I find it convenient that Lightroom has options to display images from a range of time spans and that I can easily reverse search. I'd like to see these features be improved, though. It is the best image workflow app, but not by as wide a margin as I expected it to be. If you pay attention, Lightroom has come a fair way. When I first started writing about this game years ago, Lightroom was the best in the business. With more competition in the form of apps such as Aperture and newer entrants like Photoshop for iPad, Adobe will certainly continue to improve. However, **on a Mac**, Lightroom is still better than the other major players. I still see no other app with the same degree of polish and attention to detail. Far and away the best way to use an iPhone as a camera. The iPhone Prosumer app offers a similar capability and is on par with the current smartphone apps. However, even the Smartphone apps have major issues with getting the images into critical modes. Lightroom and leading Mac apps such as Camera+ and Aperture remain the best apps by a mile. If only they allowed import to take place on an iPad!
