Microsoft SQL Server provides a powerful mechanism to automate the development, deployment, and testing of a database application, it is called Dynamic Management Objects (DMOs). In this article, we are going to see how we can use DMOs to perform conditional and unconditional control flow statements. We will first create a table using DMOs to store our data and then we will use DMOs to run conditional and unconditional execution flows. Starting with SQL Server 2016, we have added a new feature called XQuery DMOViews. It is a new in-memory XQuery DMOView that can be used to create conditional and unconditional execution flows using the INSERT, SELECT, and UPDATE statements. Express Edition Summary: Connect to Microsoft SQL Server via ODBC or using ADO.NET Easy to learn interface Supports easy SQL code formatting Microsoft SQL Server Administration Studio (SSMS) is the IDE for SQL Server development, which features, among others, a graphical SQL editor, object browser, database diagram viewer, and data tools. It is no doubt a professional tool. On the other hand, we are always looking for ways to maximize the benefits of such a tool. This can be done, for instance, by offering a more simple way to navigate and control the objects in the project. One such functionality is SQL navigation. In this article, we will learn how we can use it in SQL Server Management Studio (SSMS). At the heart of SQL Server Management Studio, there are two main objects: database files and schema. Each database file contains the information about the tables and the database. Similarly, each schema

contains the information about the tables and the database. Both objects can be used to navigate and control the databases in the SQL Server instance. In SQL Server Management Studio, we can find a number of navigational items like "Tables," "Relations," "Object Explorer," etc. and there are many options to control the way they work. In this article, we will learn how to navigate a SQL Server schema using "Object Explorer." Also, we will learn how to select the objects in the "Object Explorer" and how to open the properties. In this article, we will learn how to use navigation in the context of T-SQL script execution. SQL Server Express Summary: Connect to Microsoft SQL Server via ODBC or using ADO. 2edc1e01e8

The Express Edition is not a license. It is a trial version. You can use it for 15 days and evaluate the product. When the trial expires, the product is converted into a license product at the current pricing of the standard edition and added to the Cart. After trial expires you need to uninstall product from the machine. Do not use the trial version for commercial purposes. The trial version does not count towards the number of SQL Server licensing subscriptions. Supported DBMSs: SQL Server 2012 SQL Server 2014 SQL Server 2016 SQL Server 2017 SQL Server 2019 Express Editions are only available to new customers and are not available for existing customers. Express Editions are only valid for 15 days from the date of purchase, and then they are automatically converted to standard versions. You can see on your My Account on our website. For more information, refer to the license agreement included with your product. Limitations: This product is a free trial version of the Express Edition. After the trial period expires, a license key is generated, but the database product (DB Express or Enterprise edition) you are trying to run will not be activated. If you receive the message "Unable to activate license - The trial has expired.", please refer to the terms and conditions to obtain a new license key. Please note that SQL Server 2014 Express Edition can only be used in conjunction with DB Express Edition. You cannot use both Express and Developer Editions together. Code Examples Get object names for all objects in a database: DECLARE @NameList table (name sysname); SELECT @NameList = (SELECT name FROM sys.objects ORDER BY name FOR XML PATH('')) FROM sys.objects WHERE type_desc = ''; -- OR @NameList IS NULL Examples for license activation with an expired trial: Activate SQL Server 2017 Express Edition A user has an expired trial of SQL Server 2017 Express Edition, and the user wants to activate the product. First, you need to confirm that the expired trial is the reason for the activation. If the trial was not expired and the user has already activated the product, it will not allow the user to activate the product. In the license history, the expired trial of SQL Server 2017 Express Edition appears. Go to the License History page and find the expired trial. Click the "Activate product" button and then enter the license key that you received when you purchased the product. To cancel the activation, click the "Cancel activation" button. The product will not be activated. Note: You can only activate the product once. If you want to install more instances of the product, you must purchase a new license
