There's no feature missing in Photoshop these days: the user interface is workable on touchscreens; the basics are all there; there are plenty of easy-to-use tools and panels; there's a lot of additional editing capability; and of course, there's video and animation generation. It's just that on its own with no additional purchase necessary, it lacks the power of Elements. The look and feel takes a few minutes of acclimatization to really feel comfortable with. Many Elements users may find that the sharpness of some features and tools are different compared to earlier versions. Some of use will already be familiar with this version, but the tools get more complicated as you venture into more editing. If you are to use both Photoshop and Elements, you will want Lightroom, which is the Photoshop add on that has similar editing capabilities as Photoshop but is simpler and integrates better with the other elements you want to use. **ABOVE:** A superimposed image to illustrate the use of **automatically** enhancing with the pen tool in the Photo Inpainting panel. **BELOW:** The same image, captured with the iPhone 7 Plus, on the other hand, where the image looked much less sharp and had a black box over the edges (indicating it had been blurred). The stop-motion title sequence was added through the **Animation** panel. Things we see as a beginner are how quickly we learn to use the tools: most workplaces have made experience with Photoshop's controls, so the iOS panel feels easy to use, auto adjustments or presets give a preview of what you can expect to see, interface elements have been widened so that features are clear and visible, and the interface and tools are concise and easy to access. Problems that crop up leave you aware that it is worth staying aware to solve.

The location of the new color can be set in the Options Bar, under Overlay, or on a layer.
- Hard Light: This option may give a brighter look to a scene, or it can simulate lighting from a spotlight, or projector screen, or even your front porch.
- Soft Light: This powerful effect creates a softer look, with light bouncing off the surrounding objects. It can help balance the mood or subject. e3d0a04c9c
