Lightroom is a digital darkroom that offers an interface for the photographer, editor, or content creator to view and change their images during the editing process. Several of the features of Lightroom 6.1 (and 7) are similar to those you find in Photoshop. The major difference between the two is that Lightroom is intended for photographers as a tool for image management (photo management system). Adobe Photoshop is intended for the designer as a tool for image editing (photo editor). There are many photographers, however, change their thoughts on the matter and use both Lightroom and Photoshop. Adobe Photoshop is offered by Adobe as a Creative Cloud membership which includes access to all of the product line upgrades and new product releases every month. You also get free access to webinars, new features and updates, tutorials, training, and new content. Check out the features of Photoshop first because there are many groups of similar products in the marketplace, and you'll have your hands full just adding up all the features and buying into them all. The math doesn't add up though when it comes to financial cost. You have to figure in the cost of a subscription to Adobe Creative Cloud if you don't already have it. If you are wondering about the cost for a photographer that uses the software to manage and edit images, consider the subscription fee, then add up the cost of the software or depending on your subscription plan the cost of using a photo lab, or even the cost of purchasing Adobe Lightroom, Camera Raw, Lightroom mobile, Lightroom web, and any other Adobe products you choose to add.
